

# SUSTAINABLE CLOTHES

Today, people have started to produce and consume a lot in the field of textiles. And it continues to multiply more and more every day. We are also talking about this topic in my project. Children grow and develop very fast in their developmental processes. The clothes they wear are thrown away before they get old.

## Our Purpose

Our aim is to make clothes for children between the ages of 5-15. This outfit can be worn from 5 years old to 15 years old. The skirt of the outfit can grow and shrink from the body.

We used a stretchy and elastic fabric for the upper part of the outfit. So the outfit can expand more easily. There are also buttons on the outfit. With these buttons, it shrinks easily. There are 3 different pieces for the outfit and skirt. There are skirt pieces for 5 years old, 10 years old and 15 years old. These skirts can be put on and taken off

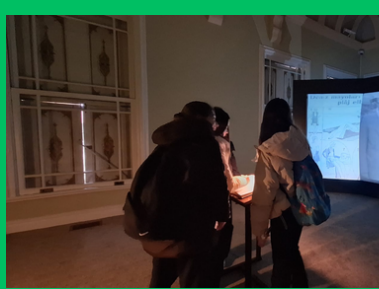

Thus, families will not have to constantly buy clothes for their children and will contribute to the family economy. Children will be able to wear the outfit worn on special occasions from the age of 5 to 15. It will also reduce consumption and production. We will protect nature and natural resources.
